When I looked at the paper it didn't seem like the place to put the remarks about no guarantees, since it is so focused on forestry. Instead for the meeting I would suggest talking points for Dennis and Will along these lines:

- This paper outlines key areas where progress is need to address the largest areas of deficiency in OR's CNP program: forestry management.
- OR has *interim* approval for all other management measures under CZARA including its recent submittals on new development and onsite disposal systems. Note that we still have to deal with as-yet-unaddressed public comments on sufficiency of the Agriculture management measures.
- NOAA and EPA will work with OR overing the coming year towards getting to an approvable CNP, focusing on the forestry measures as well as addressing Ag issues.
- Once a complete CNP package is received from OR that the agencies believe sufficiently addresses all the outstanding management measures, NOAA and EPA will issue a FRN for public comment on the entire OR CNP, then take final action on OR's entire CNP at that time.

Thanks Joelle. I think the point about framing this to ensure understanding by OR that what's in the doc doesn't guarantee approval of entire CZARA program is important and isn't yet reflected in the draft. I can add something along those lines in my edits.

See 4 big messages on matrix from Allison below. I've attached Allison's track changes, but know she's send separately to tech team. J.

See my comments so far. I've added my comments in track changes to a version that Alan has already marked up to make sure statements are consistent with decision doc. I've only gotten through riparian section but anticipate more of the same for the others.

Ex. 5 - Deliberative

4. Need to make sure our "asks" here are consistent with our "asks" in the decision doc..especially what's needed for voluntary programs.

Allison
